

# Save Water While Staying HOME

If your family is staying inside, you might use a lot more water than usual. But your water and sewer bill doesn't have to rise too high when you're at home...try these tips to save while you stay in!

## Turn off the TAP

Whether washing your hands for 20 seconds or brushing your teeth for two minutes, you don't have to keep the faucet running. Save 200 gallons of water in a month by turning off the tap while you scrub.

## Let Your Dishwasher Do the Work

Did you know it takes less water to run a full dishwasher than to wash dishes by hand in the sink? Save more water by scraping plates into the trash rather than rinsing them before loading the dishwasher.

## Load up on Laundry

More kids at home means more laundry. Save energy by washing clothes in cold water, and conserve water by only running the washer with full loads.

# SAVE While Showering

Showers use less water than baths. Order a WaterSense labeled showerhead to replace your current model, and you'll save water and energy without noticing a difference in flow!

# WATCH what You Flush

Only three Ps should go in your toilet—pee, poo, and (toilet) paper. Toilet paper is designed to dissolve, but disposable wipes and paper towels don't break down and can clog toilets and drains. Safely dispose of them in the trash.

# BE a Leak Detective

Turn your kids into leak detectives! Place a few drops of food coloring in the tank at the back of the toilet; if the color shows up in the bowl, you might need a new flapper. Don't forget to flush when done!

# CURB Outdoor Water Waste

Watering the yard is a great way to get outside in the fresh air. Just don't water in the middle of the day when temperatures are highest, or the sun will evaporate water before it reaches your plants.
